AMENDMENTS TO THE SPECIFICATION

Please amend the specification as follows:

The first full paragraph of Page 17, beginning on Line 1 and ending on Line 10 as follows:

The support bracket 150 is in an inverted L-shaped configuration and has an elongated horizontal component with an upper surface and a lower surface and of a length shorter than the horizontal component of the cutting guide and a downwardly extending vertical component. The support bracket has an aperture through the vertical component thereof with a screw coupling the support bracket to the stop piece with the lower surface of the horizontal component in contact with the upper surface of the stop piece. The support piece bracket is spaced a short distance from the second end thereof.

The paragraph beginning on Page 17, Line 20 spanning Page 18, Line 3 as follows:

The configuration of Figures 16 and 17 is similar to the configuration of 14 and 15 Figures 14 and 15 is similar to the configuration of 12 and 13 except that the cutting quide is spaced a short distance from the second end thereof rather than the first end and the support bracket is spaced a short distance from the first end rather than the second end. This is for miter cutting and compound cutting of lumber. The other components of

this embodiment are essentially the same as in the prior embodiments.
